Brask (born 1943 in southern California), an American author and educator, lives in Central Florida, where he writes full time. Brask was educated at the University of Southern California, where he was awarded a BA in 1968 and a PhD in 1973. He has taught at Syracuse University and the Florida State University and since 1974 has been the director of the Florida Center for Reading Research and Development in the Department of Journalism and Media Studies at the University of Central Florida. Brask has produced over 200 articles, monographs, and books on reading, language, and communication. His seven books – Including Eminent Children, White Light, Serving the Poor, and Some of My Best Friends -- have been published since 1990 and all are on the Florida recommended reading list. The interactions of HIV with FDCs can influence the development of HIV-specific immune responses. We hypothesize that the development of HIV-specific immune responses is compromised in cases of HIV infection which are characterized by higher numbers of FDCs. Such a scenario may result from a preference for HIV infection of FDCs and a subsequent loss of FDC function. The overall objective of the proposed study is to assess how HIV replication within FDCs can influence the development of HIV-specific immune responses. To address this objective we propose the following specific aims. 1. To determine the ability of HIV-infected FDCs to stimulate T cell responses in vitro. 2. To investigate whether FDCs from HIV-infected subjects exhibit reduced T cell stimulatory capacity. 3. To determine whether FDCs from HIV-infected subjects can sustain antigen-specific T cell proliferation. 4. To explore whether HIV-infected FDCs influence the development of HIV- f678ea99e
